

## CONTAINER DOMES AUSTRALIA PATENTED TWIST LOCK BRACKET MOUNT SYSTEM

Container Domes Australia has designed and patented its own Twistlock Bracket Mount System for its standard range of Container Dome Shelters and ContainerShed™ products.

The Twistlock Bracket Mount System is the easiest, quickest and safest installation method for all our shelters, locking the base rails of the structure onto the containers eliminating any bolting, screwing, welding or hot works on site and, causing zero damage to the containers during the installation process.

If site relocation or on-selling of your containers is an option, then the Twistlock Bracket Mount System is a must-have addition to your Container Domes Australia set-up.

Demobilisation is fast and simple, simply unlock the brackets and remove the Dome with no damage to the base rails or your containers.
